

DIAMOND finish

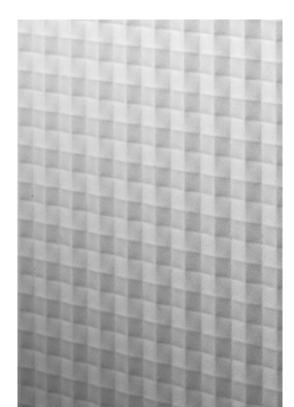

DIAMOND is the new aesthetic finish featuring a diamond-pattern profile. The final effect is that of an elegant and consistent three-dimensional look on the surface of sandwich panels. The DIAMOND profile is an exclusive of Isopan, and is compatible with PIR wall panels, either with visible or concealed fastening.

DIAMOND has been designed to offer a unique pattern that combines new, sturdy functionality and contemporary aesthetics in the finished product. The DIAMOND profile improves the mechanical resistance to the stress caused by thermal expansion, even when using dark colours, providing higher functional and aesthetic resistance.

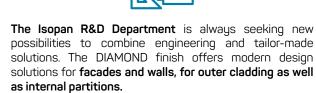

Diamond is compatible with the new special Tech Black colour and with the Isopan PREMIUM pre-painted range. Thanks to the new high performance Isopan PREMIUM prepainted range, selected by the Isopan R&D Department after severe durability tests, with minimum resistance class RC4 and RUV4.

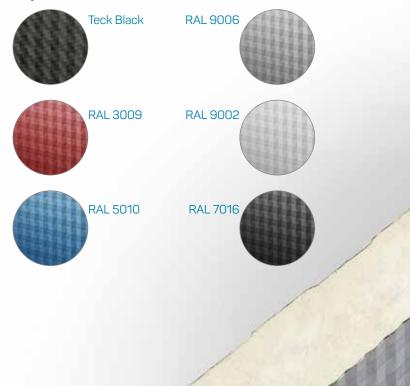

Isopan PREMIUM Resistance performance

RC4 - RUV4

Contact Isopan for the availability of the standard colour range and PREMIUM colours $\,$

The surface of metal facings is profiled forming a **square-grid**, **three-dimensional texture**, where the slanted faces reflect light and colours with a unique effect. Thanks to its perfect aesthetic result, the structured and stiffened effect of the surfaces adds a dramatic depth and tactile feeling to pre-finished steel, while contributing to reduce light glare to the minimum.
